Problem Statement

Design and implement a simple calculator using Java Script for operations like addition, multiplication, subtraction, division, square of number etc.

index.html

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <title>Simple Calculator</title>
  <link rel="stylesheet" href="styles.css">
</head>
<body>
  <div id="calculator">
    <h2>Simple Calculator</h2>
    <input type="number" id="num1" placeholder="First number"><br>
    <input type="number" id="num2" placeholder="Second number"><br>
    <button onclick="calculate('add')">+</button>
    <button onclick="calculate('subtract')">-</button>
    <button onclick="calculate('multiply')">*</button>
    <button onclick="calculate('divide')">/</button>
    <button onclick="calculate('square')">Square</button>
    <div id="result">Result: </div>
  </div>
  <script src="script.js"></script>
</body>
</html>
```

style.css

```
body {
  font-family: Arial, sans-serif;
  text-align: center;
  margin-top: 50px;
}

#calculator {
  display: inline-block;
  border: 2px solid #888;
  padding: 20px;
  border-radius: 10px;
  background-color: #f2f2f2;
}

input[type="number"] {
  width: 120px;
  padding: 10px;
  margin: 5px;
  font-size: 16px;
}

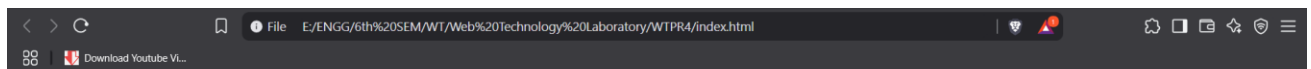

button {
  padding: 10px 15px;
  margin: 5px;
  font-size: 16px;
  border: none;
  background-color: #4CAF50;
  color: white;
  border-radius: 5px;
  cursor: pointer;
}

button:hover {
  background-color: #45a049;
}

#result {
  margin-top: 20px;
  font-size: 18px;
  font-weight: bold;
}
```

sript.js

```
function calculate(operation) {
  const num1 = parseFloat(document.getElementById("num1").value);
  const num2 = parseFloat(document.getElementById("num2").value);
  let result;
  let str;
  switch (operation) {
    case 'add':
      result = num1 + num2;
      str = num1 + " + " + num2 + " = " + result;
      break;
    case 'subtract':
      result = num1 - num2;
      str = num1 + " - " + num2 + " = " + result;
      break;
    case 'multiply':
      result = num1 * num2;
      str = num1 + " * " + num2 + " = " + result;
      break;
    case 'divide':
      result = num2 !== 0 ? num1 / num2 : "Cannot divide by zero";
      str = num1 + " / " + num2 + " = " + result;
      break;
    case 'square':
      result = `Square of ${num1} is ${num1 * num1}`;
      str = result;
      break;
    default:
      result = "Invalid operation";
  }
  document.getElementById("result").textContent = "Result: " + str;
}
```

Simple Calculator

+ - × ÷ Square

Result: 27 + 11 = 38
